TOM BEREZNICKI ON FUTAR®

Since I graduated in 1976 we came a long way in the material we used for bite registration. 16 years ago I have been introduced to FUTAR® and been using ever since. It's the most accurate material to me and offers the right degree of strength not to break on removal from the mouth nor when placed on the working casts. The transfer of information from the mouth to the articulator is more accurate than with similar materials I used.
